 Butterflies are insects. They have four wings. Before you see a butterfly, it starts its life as an egg and then changes into a caterpillar. After that, the caterpillar slowly changes into a beautiful adult butterfly. Most caterpillars eat plants, and most butterflies eat the nectar (like honey) from flowers.

Ants

Most ants live together in a big 'house' called a colony. There are queen ants, worker ants and soldier ants. There are more than 12,000 types of ants in the world. Some ants are dangerous. An ant can lift 20 times its own body weight. If you were an ant, you could pick up a car.

Flies

There are over 100,000 types of flies in the world. Flies only have two wings. Flies are not dangerous like lions or sharks, but they are dangerous because they carry disease. When a fly sits on your food, it can bring disease. People do not like flies, but they make good food for birds, spiders and frogs.
